Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses.

PERSONA NAME: HR Administrator (Primary User)

SAYS

- I spend hours manually entering employee data from Excel into ServiceNow every month
- Duplicate records keep appearing and I have to clean them up manually
- I wish there was a simpler way to load spreadsheet data directly into ServiceNow

THINKS

- There must be a reliable way to bulk-import spreadsheet rows without errors
- How can I map columns in my Excel sheet to the right ServiceNow fields?
- I need to be confident that duplicate employee records are not created

DOES

- Manually enters employee records from spreadsheets row by row into ServiceNow
- Spends extra time identifying and deleting duplicate records after entry
- Cross-references Excel columns with ServiceNow table fields

FEELS

- Frustrated by repetitive, error-prone manual data entry
- Anxious about data quality and duplicate record creation
- Eager for an automated import process using ServiceNow Import Sets and Transform Maps
