Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Person or system outside the project (e.g., HR Admin)
Rectangle with header	Process	Activity that transforms data (e.g., Transform Map)
Rectangle (solid fill)	Data Store	Where data is held (e.g., Import Set Table, u_employee_test)
Labeled arrow	Data Flow	Movement of data between entities, processes, and data stores

Level 0 - Context Diagram

HR Administrator --> [Employee Data (Excel)] --> ServiceNow Import Sets System --> [Imported Records] --> Employee Test Table (u_employee_test)
ServiceNow Import Sets System --> [Reports & Dashboard] --> HR Administrator / IT Manager

Level 1 - Detailed DFD

1. HR Administrator --> uploads Excel file --> Process 1.0: Data Source Configuration
2. Process 1.0 --> stages raw rows in --> Import Set Table (Staging Data Store)
3. Import Set Table --> feeds into --> Process 2.0: Transform Map Execution
4. Process 2.0 applies: Field Mapping + Coalesce + Data Transformation
5. Process 2.0 --> writes validated records to --> Employee Test (u_employee_test)
6. Process 2.0 --> logs execution status (inserted/updated/ignored) in --> Import Log
7. Employee Test Table + Import Log --> queried by --> Process 3.0: Report & Dashboard
8. Process 3.0 --> displays summary widgets to --> HR Administrator / IT Manager
