

Sample Project Documentation

Date	30 September 2026	Maximum Marks	5 Mark(s)
Team ID	6ab633a5856a91bc3Bce59	Project Name	Import Data using Transform Maps (S

Abstract

This project demonstrates the use of ServiceNow's Import Set and Transform Map capabilities to import employee data from an Excel spreadsheet into a custom Employee Test table (u_employee_test). The solution addresses the challenges of manual data entry and duplicate records by applying field mapping, data transformation, and coalesce logic for deduplication. Reports and a dashboard are created to provide structured visibility into the imported data.

Introduction

Organizations managing employee records frequently need to import data from external spreadsheets into ServiceNow. Manual data entry is time-consuming, error-prone, and unsustainable. ServiceNow offers built-in Import Sets and Transform Maps that allow structured, repeatable data imports.

This project utilizes these native capabilities to:

- Ingest an Excel spreadsheet as a ServiceNow data source
- Stage raw records in an auto-created import set table
- Map and transform fields into the target Employee Test table (u_employee_test)
- Prevent duplicate records using coalesce on a unique key
- Present imported employee data via reports and a consolidated dashboard

Objectives

- Import employee records from an Excel spreadsheet into Employee Test (u_employee_test)
- Configure accurate field mapping between staging columns and target fields
- Apply data transformation during the mapping process
- Configure Coalesce on a unique field to prevent duplicate record creation
- Create reports and a dashboard for operational visibility into imported records

Methodology

Phase 1: Prepare employee data spreadsheet (Excel) with standardized columns

Phase 2: Create custom Employee Test table (u_employee_test) in ServiceNow

Phase 3: Upload Excel spreadsheet as data source and stage data in import set table

Phase 4: Configure transform map with field mapping and coalesce

Phase 5: Execute transform and verify records in Employee Test (u_employee_test)

Phase 6: Create reports on target table and add them to a consolidated dashboard

System Architecture

Excel Spreadsheet --> Data Source (Upload) --> Import Set Table (Staging)

--> Transform Map (Field Mapping + Coalesce + Transformation)

--> Employee Test Table (u_employee_test Target)

--> Reports & Dashboard

Implementation Details

Component	Planned Configuration Details
Data Source	Excel spreadsheet to be loaded via System Import Sets > Data Sour
Import Set Table	Staging table to hold incoming raw records from spreadsheet
Target Table	Custom table Employee Test (u_employee_test) to store imported re
Transform Map	Transform map to link staging table to u_employee_test
Field Mapping	Explicit pairwise mapping from spreadsheet columns to target fiel
Data Transformation	Mapping logic to convert values into appropriate field formats
Coalesce	Unique identifier (Employee ID) set to coalesce to prevent duplic
Reports	Reports planned to query and visualize data from u_employee_test
Dashboard	Dashboard planned to consolidate and display configured report wi

Expected Results

- Employee records from the Excel spreadsheet will be loaded into Employee Test (u_employee_test)
- Field mapping will direct each spreadsheet column to its corresponding target field
- Coalesce configuration on Employee ID is expected to prevent duplicate records upon re-import
- Configured reports are expected to display employee distributions based on target table data
- The ServiceNow Dashboard is expected to offer a centralized view of all import reports

Conclusion

This project aims to demonstrate how to import structured data from an Excel spreadsheet into ServiceNow using Import Sets and Transform Maps. By leveraging field mapping, coalesce for deduplication, and platform reporting, the proposed pipeline is designed to replace manual data entry with an organized, repeatable import process that ensures data consistency and provides visual reporting for administrative review.

Team Contributions

Team Member	Assigned Responsibilities
Surya Prakash T (Lead)	Responsible for spreadsheet creation, table creation, reports, an
Varun S	Responsible for Import Set Table creation and Transform Map setup
Sundar P	Responsible for data transformation, validation, and coalesce con
Sreehari B	Responsible for inserting new data in Excel format and Report 1 c
